🟢 EASY (Basics: SELECT, WHERE, ORDER BY, simple JOIN, simple aggregates)

E1. List all products in the "Beverages" category.

E2. Find all customers from "Mumbai".

E3. List all branches that are currently "Active".

E4. Show the 10 most expensive products (by D_Mart price).

E5. How many total orders have been placed?

E6. Find all orders with a grand total greater than ₹5000.

E7. List all distinct payment methods used.

E8. Show product name along with its category name (basic JOIN).

E9. Find all customers who are "Female".

E10. Count how many products exist in each category.

🟡 MEDIUM (Multi-table JOINs, GROUP BY + HAVING, subqueries, CASE, dates)

M1. Find the total revenue generated by each branch.

M2. List the top 5 customers by total amount spent.

M3. Find products that have never been ordered.

M4. Find the average rating for each product.

M5. List all orders placed in the last 30 days (relative to 2026-07-08).

M6. Find customers who have placed more than 2 orders.

M7. Show monthly revenue trend (year-month wise total sales).

M8. Find the most popular payment method (by number of times used).

M9. List products that are nearing expiry (within next 15 days).

M10. For each category, find the average discount offered.

M11. Find the number of items returned for each return reason.

M12. Use CASE WHEN to label each order as 'Small' (<1000), 'Medium' (1000–5000), or 'Large' (>5000), and count how many orders fall in each bucket.

M13. Find branches where the status is NOT 'Active'.

M14. Find the customer(s) who gave the lowest rating (1) — show customer name and product name.

🔴 **HARD (Window functions, CTEs, correlated subqueries, ranking, running totals)**

H1. Rank products within each category by price (highest first) using RANK().

H2. Find the second-highest priced product in each category (without using LIMIT).

H3. Calculate a running total of revenue for each branch, ordered by order date.

H4. Find customers who have never returned any item (correlated subquery / NOT EXISTS).

H5. Using a CTE, find the top 3 best-selling products (by quantity sold) overall.

H6. For each customer, find their most recent order date and how many days ago that was.

H7. Find the month-over-month percentage growth/decline in total revenue.

H8. Identify branches whose return rate (returns ÷ items sold) is above 15%.

H9. Find the top-selling product per branch (i.e., partition by branch, rank by quantity sold).

H10. Find customers whose total spend is above the overall average customer spend.

H11. Write a query using a self-referencing style comparison to find products priced above the average price of their own category (correlated subquery).
